Summary

Cybersecurity engineer with hands-on SOC L1/L2 and enterprise security-engineering experience across EDR, WAAP/WAF, and DFIR workflows, with experience automating incident response via Fusion SOAR and briefing client stakeholders on detections.

Technical Skills

Detection & Response: CrowdStrike Falcon (EDR, ITP, SIEM), Trend Micro, Splunk, Wazuh, Action1, EDR Investigation (Process Trees, Parent-Child), MITRE ATT&CK

WAF & SSL Security: WAF Implementation & Hardening, SSL/PFX Configuration, CDN

SOC Operations: Alert Triage (L1/L2), Fusion SOAR, IOC Management, Detection Policy Tuning, Active Directory Monitoring, Endpoint Telemetry Analysis

Security & Forensics: DFIR (Containment, Eradication, Recovery), Malware Analysis (PE Studio, VirusTotal), Digital Forensics (Autopsy, FTK Imager), Log Analysis

Offensive & Networking: Nmap, Metasploit, SQLi/XSS, Network Enumeration, Wireshark, Tcpdump, PCAP Analysis

Programming & Dev: Python, Flask, Bash, C/C++, SQL, Linux, Windows, Ansible

Experience

Graduate Engineer Trainee – Cybersecurity, KSB Limited

Jul 2026 – Present

- Contributed to enterprise security posture planning and product evaluations across **SIEM**, vulnerability management, **WAF**, network security, **DLP**, and secure SDLC alongside the cybersecurity lead, and helped shape the company's AI usage policy.
- Built and validated a **Wazuh SIEM** proof of concept across Windows and Linux endpoints, including **Sysmon**, external syslog, and custom detections.
- Implemented and validated a managed **Web Application Firewall (WAF)** across the company's web and API applications – covering onboarding, SSL and CDN configuration, DNS cutover, and vulnerability scanning – and supported origin-protection hardening planning.
- Reviewed alerts from the WAF, **EDR**, **DLP**, and other detection systems together to confirm genuine security threats and coordinated the right response with the security team.

Cybersecurity Intern, Amazure Technologies

Jan 2026 – Apr 2026

- Triaged **30–40 alerts daily** (SOC L1/L2) across endpoint and identity threat categories using **CrowdStrike Falcon** (EDR, ITP, SIEM).
- Delivered client-facing incident briefings on threat detections, policy changes, and remediation workflows to non-technical stakeholders across concurrent accounts.
- Deployed and tuned **detection & prevention policies** across enterprise endpoints; validated true positives and tracked lateral movement.
- Engineered **Fusion SOAR** incident response workflows, managing IOCs and cutting documentation time by **~25%**.

Cybersecurity Research Intern, COEP Technological University

May – Jul 2025

- Built **StegIntel** – AI steganography detection tool using **Random Forest + CNN** pipeline; reduced per-sample triage from ~15 min to under 2 min.
- Engineered **LSB brute-force decoding** and payload extraction for structured analysis (ZIP, PDF, DOCX); research accepted at **IEEE-INSECT 2026**.

Secure Web Development Intern, Agrawal Creations

Jul – Sep 2024

- Built a PHP/MySQL admin panel with parameterised queries and input validation, eliminating SQLi and XSS attack surfaces.

Projects

ASMS – Application Security Management System

2026

- Designed **ASMS** to establish a centralized application inventory and lifecycle process for an enterprise environment where application tracking was undocumented and inconsistent, closing visibility gaps that left **shadow-IT** and unmanaged applications unmonitored.
- Built a role-based approval workflow (application owner → reporting manager → cybersecurity admin) with a security-questionnaire-driven **risk score**, mandatory cybersecurity sign-off, and integrated **WAF** protection requests before any application could go live.
- Established change-control and **End-of-Life** processes – locking sensitive security fields behind cybersecurity approval and formalizing application retirement – to prevent silent takedowns, reduce wasted monitoring effort, and maintain a full audit trail of security review decisions.

Elio – Automated SOC Reporting Engine | GitHub

2026

- Developed an automated **SOC Intelligence Reporting Engine** (Python/Flask) integrating CrowdStrike Falcon APIs to aggregate EDR, NG-SIEM, and Identity telemetry, mapping activity to MITRE ATT&CK and visualizing SOC KPIs (MTTD, MTTR, False Positives) for CISO-level reporting while handling sensitive **TLP:AMBER intelligence**.

Education

DY Patil International University, Akurdi, Pune, B.Tech in Computer Science

2026

- Focus:** System Security, Threat Detection, Secure Development, Cloud Security

Certifications

SC-900 – Microsoft Security, Compliance & Identity Fundamentals

Dec 2025

CrowdStrike University – Falcon Platform, SIEM, SOAR, Identity Protection, CQL, Firewall

Feb 2026

Trend Micro – TrendAI Vision One: Endpoint, SecOps, Threat Intelligence, AI Security

Mar 2026

SC-500 – Cloud and AI Security Engineer Associate

Expected Nov 2026
